TW-series Torque Wrenches

Maury's torque wrenches are recommended for tightening coaxial connectors in order to obtain optimum repeatability and prolong connector life. They employ a 'break' design so it is impossible to over-torque a coupled junction, and torque can be applied in either direction. Each Maury torque wrench is factory preset to the proper in/lbs for tightening its coaxial connector type, and the color coded handles make it easy to select the correct wrench from your toolbox at a glance.

Specifications

For Use With Connector Type:	3.5mm, 2.92mm, 2.4mm, 1.85mm
Wrench Size (inches):	0.312 hex
Preset Torque (in/lbs):	8 ±0.8
