

Adjustable Torque Wrenches

Ratcheting

Nonratcheting

Set the desired torque and the wrench indicates when it's reached with an audible click and an impulse in the grip. To relieve pressure on the spring and maintain calibration, set torque to the lowest reading on the scale when not in use. These wrenches come with a calibration certificate that is traceable to NIST or UKAS and includes the test measurements that confirm accuracy.

Note: Accuracy ratings do not apply to the lower 20% of the torque range.

Square Drive Size	Torque Range	Graduations	Accuracy		Overall Lg.	Material	Grip Material		Each
			Clockwise	Counterclockwise					
Ratcheting with Calibration Certificate with Test Data Traceable to NIST Certificate of Calibration									
3/8"	5 to 75 ft.-lbs. 10.2 to 98.3 Nm	0.5 ft.-lbs. 0.7 Nm	±4%	±6%	16"	Chrome-Plated Steel	Metal	85555A311	\$198.04
Nonratcheting with Calibration Certificate with Test Data Traceable to NIST Certificate of Calibration									
3/8"	5 to 75 ft.-lbs. 19.66 to 98.3 Nm	0.5 ft.-lbs. 0.7 Nm	±4%	±6%	16"	Chrome-Plated Steel	—	85555A611	190.93
