Record pressure in a variety of applications, including fire hydrants. These compact battery-operated loggers feature a 316L stainless steel, IP67-rated housing to keep them safe from water and dust.

Configuring your logger is easy. Simply download and install the free software onto your computer, plug your logger in using the USB cable, configure it and you're ready to record and analyze data. Set the logger to start and stop at predetermined times or when there is an alarm condition. A second, optional package is available as a free downloadable app from Google Play™ that turns your Android device into a portable data retrieval device. This app features email functionality to send data files from the field, plus lets you clear memory and start/stop recording. App requires USB On-The-Go Cable (stock # 75719).

Click here to download software. (https://www.usabluebook.com/download/TrackIt_Software.zip)

Includes: 1/4" NPT mounting fitting lithium battery software and USB interface cable. Android device not included.

Note: NIST-calibrated units are available as special order. Contact USABlueBook for more information.

Tech Specs
• Accuracy: ±1% • Data storage: 64,000 points • Sample intervals: 2 seconds to 24 hours • Power supply: lithium battery (3 to 5 year life)
